**The most effective, inexpensive
tool for terrain grooming and
pasture management**

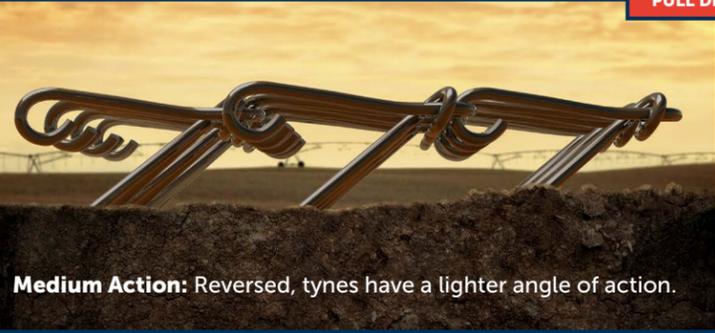

Unlimited flexibility in an all-season tool...

Each 4' tyne module can be towed in the operator's choice of 3 actions: regular, aggressive or smoothing action. Combining modules allows for dual actions.

They are quick and easy for a single user to configure, by unhooking from either the drawbar or the module in front, rotating 180 degrees or flipping over, and reconnecting.

Tyne positions for every application...

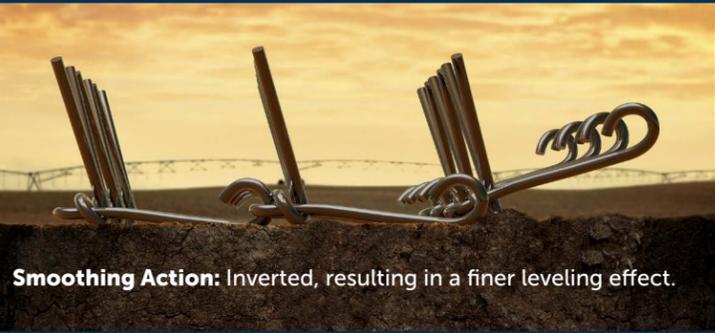

PULL DIRECTION →

Medium Action: Reversed, tynes have a lighter angle of action.

Aggressive Action: Tynes stand at an aggressive 75° angle.

Smoothing Action: Inverted, resulting in a finer leveling effect.

Dual Action: Front section aggressive action, rear section levels.

The Delta Flexible Harrow drawbars for ATV's

ATV-sized S3 Delta Harrows are ideal for landowners, arena operators, grounds keepers and contractors. They are easily adapted to the job and conditions by one person, and make quick work out of a very wide array of land improvement chores. The maintenance-free design and rugged materials mean the user's time is spent getting the work done, and storage means just unhooking.

For maximum versatility tynes are available in 7/16", 1/2" or 5/8" diameters.

Typical ATV drawbar configurations and corresponding horsepower requirements
